Product Package Data Privacy Record - July 2026

Effective date: July 4, 2026

Scope: Referral codes, attendee demographics, sponsor presentation, and custom event sections

Purpose

This record defines how the July 2026 product-package data should be collected, accessed, reported, retained, and removed. It supplements the platform privacy policy and does not authorize unrelated use of attendee information.

Data Inventory

Data	Source	Purpose	Access boundary	Public exposure
Birthday	Account onboarding and registration	Age validation and future aggregate age reporting	Attendee and authorized event-management workflows	Never
Gender	Account onboarding and registration	Future aggregate demographic reporting	Attendee and authorized event-management workflows	Never
City	Profile and registration	Geographic analysis and event planning	Attendee and authorized event-management workflows	Never
Referral code snapshot	Registration pricing	Reproduce the commercial terms used at checkout	Registration owner and authorized event managers	Code may appear on the owner's receipt; configuration is not public
Referral usage	Successful registration	Usage-limit enforcement and campaign reporting	Authorized event managers	Never
Sponsor presentation data	Event organizer	Public sponsor recognition	Authorized event managers can edit	Name, tier, description, website, and visible logo may be public
Custom event sections	Event organizer	Flexible public event information	Authorized event managers can edit	Visible sections are public

Collection Rules

- Collect only fields required by the active form and business purpose.
- Birthday must be a valid past date within the last 120 years.
- Gender values use the controlled application list; free-text values must not be accepted unless a reviewed self-description workflow is introduced.
- City must not be blank and should not be treated as verified residence.
- Do not infer sensitive traits from birthday, gender, city, referral behavior, or event attendance.

Access and Export Rules

- Event-management endpoints must enforce event and organization ownership.
- Public event responses must not contain birthday, gender, city, or referral usage records.
- Attendee-level exports are operational records and must only be available to authorized event managers.
- Executive or external demographic reports must use aggregates. Groups smaller than the approved privacy threshold must be combined into "Other" or suppressed.
- Sponsor contact records and relationship notes remain outside the product scope.

Retention and Deletion

- Retain referral snapshots with the registration for financial and audit reproducibility.
- Retain referral usage records for the same period as the related registration unless legal or contractual requirements specify otherwise.
- Apply the platform's account deletion and data-subject request process to birthday, gender, and city where deletion is legally permitted.
- Before production launch, the Product Owner and Privacy Owner must record the formal retention period for attendee demographics.
- Backups age out according to the approved backup-retention policy; deletion requests may remain in immutable backups until normal expiry.

Security Controls

- Data validation and pricing calculations occur on the API.
- Referral redemptions are serialized to prevent concurrent overuse.
- Sponsor uploads accept JPG, PNG, and WebP only, with size limits.
- Organizer-controlled external images are not proxied through the platform image optimizer.
- Audit events cover referral creation and activation changes.

UAT Privacy Acceptance

- Use synthetic names and demographic values only.
- Confirm UAT and production databases remain isolated.

- Confirm unauthorized users cannot retrieve referral dashboards, usage CSVs, or attendee demographics.
- Confirm public event and registration-validation responses contain no attendee-level demographic information.
- Confirm aggregate demographic reports suppress small cohorts before production promotion.

Ownership and Review

Role	Responsibility
Product Owner	Approves the stated purpose and required fields
Privacy Owner	Approves retention and aggregate-report thresholds
Engineering Owner	Maintains authorization, validation, encryption, and audit controls
Event Organizer	Uses exports only for the event's legitimate operational purpose

Review this record before production promotion and whenever demographic reporting, sponsor data, or referral attribution changes.
