

CEO Cost Summary

A simple view of costs paid, costs running today, and the expected monthly budget for commercialization.

Cost position As of **June 21, 2026**
Planning rate USD 1 = PHP 58

PAID SINCE MAY

PHP 10,614

USD 183 actually purchased

MONTHLY COST TODAY

PHP 8,352

USD 144 current recurring cost

COMMERCIAL MONTHLY BUDGET

PHP 30,676

Potential cost when fully commercial

CEO takeaway
The company is currently committed to **PHP 8,352 per month**. A realistic commercialization budget is **PHP 30,676 per month**. The higher amount should only be activated when event volume and funding justify the additional operating capacity.

What We Pay Every Month Today

BUSINESS PURPOSE	WHAT IT COVERS	MONTHLY COST
Website and application hosting	Vercel Pro and Speed Insights	PHP 1,740
Production database	Supabase Pro for the live application	PHP 1,450
UAT testing database	Separate Supabase compute for safe pre-release testing	PHP 580
Development assistants	ChatGPT/Codex, Claude, and GitHub Copilot	PHP 4,582
Total monthly cost today	Current recurring subscriptions	PHP 8,352

What Has Already Been Paid

MONTH	WHAT WAS PURCHASED	AMOUNT
May 2026	GitHub Copilot	PHP 2,262
June 2026	Hosting, Production/UAT databases, and development assistants	PHP 8,352
Total paid since May	Recorded software purchases	PHP 10,614

Annualized current cost: approximately PHP 100,575, including the current annual domain and DNS cost.

Potential Monthly Cost

This is the expected budget when Axon supports upcoming events with separate UAT and Production environments, stronger operational tools, and higher-capacity development support.

COST GROUP	WHY IT IS NEEDED	MONTHLY BUDGET
Core platform and two environments	Hosting, Production database, UAT database, email, media, monitoring, security, and temporary reservation capacity	PHP 18,386
Commercial development capacity	ChatGPT Pro and Claude Max for higher limits during releases, event preparation, debugging, and urgent fixes	PHP 12,290
Commercial monthly baseline	Recommended funded operating budget	PHP 30,676

Why UAT and Production are separate UAT gives the team a safe place to test changes before customers use them. Production remains stable for ticket buyers and event staff. This lowers the risk of failed registration, payment, email, QR ticket, or check-in changes reaching a live event.

Why higher AI plans are proposed During commercialization, testing and fixing UAT must happen while Production is supported. ChatGPT Pro and Claude Max provide more working capacity for release preparation and incident response. They support the engineering process; they do not replace human approval, QA, monitoring, or backups.

CEO Decisions and Cost Controls

DECISION	RECOMMENDED TREATMENT	FINANCIAL EFFECT
GitHub Copilot	Discontinue after the transition to ChatGPT Pro and Claude Max	Save PHP 2,262/month
ChatGPT Pro and Claude Max	Activate when commercialization work begins; review after each event cycle	PHP 12,290/month
Google Maps paid capacity	Keep as an optional reserve unless actual usage requires it	Up to PHP 15,950/month
Legal, payment, security, and emergency support	Obtain quotations before adding to the approved budget	Not yet included

Funding presentation
Present **PHP 8,352/month** as today's recurring cost and **PHP 30,676/month** as the funded commercialization target. Keep the optional reserve and unquoted professional services separate so the report remains honest and unambiguous.

Projected annual commercialization baseline: PHP 370,889, including the assumed first-year domain cost. Optional reserve scenario: PHP 46,626/month.
